While the Big Data headlines continue to be dominated by topics such as artificial intelligence (“AI”), machine learning, and blockchain, Gartner’s 2018 CIO Survey recently concluded some surprising phenomenon. For example, the #1 “top differentiating technology” for companies surveyed is still Business Intelligence (and has been for over a decade now), while AI came in at #7. Additionally, 451 Research recently forecasted the total data market would surpass \$146 billion by 2022, representing a 10%+ CAGR (3x the growth rate expected for overall global IT spending through 2020) from the 2017 figure of \$89 billion.

While AI, machine learning, and other next-generation analytics applications are certainly becoming more and more important, there are many large organizations globally that just haven’t gotten to the point in their digital transformation journey where they can focus on those types of cutting-edge applications. Instead, a much larger focus for CIOs today is centered around cloud adoption and governance. However, only 20% of CIOs are looking to the cloud as a replacement strategy, while 80% of enterprises are managing heterogeneous data portfolios that combine traditional data warehousing (e.g., IBM) with contemporary platforms like Hadoop combined with cloud services from Amazon / Google / Microsoft.

As the role of the CIO continues to evolve into being more focused on revenue generation and innovation, ClearSight expects increasing investment and M&A for digital leaders. Through the first four months of 2018, public companies alone have spent over \$120 billion on technology acquisitions, which is more than any start to a year since 2006 (besides 2015).

Q1 2018 – Salesforce Signs Definitive Agreement to Acquire MuleSoft

Transaction Summary

Salesforce (NYSE: CRM) and MuleSoft (NYSE: MULE), the provider of one of the leading platforms for building application networks, have entered into a definitive agreement under which Salesforce will acquire MuleSoft for an enterprise value of approximately \$6.5 billion. MuleSoft will power the new Salesforce Integration Cloud, which will enable enterprises to uncover data to drive deep and intelligent customer experiences.

**TARGET MuleSoft**

MuleSoft is a developer of a cloud-based application integration platform designed to connect organizational applications, data, and devices. The company's platform offers an integration software suite for connecting any application, data source, or device using APIs.

**BUYER Salesforce**

Salesforce is a provider of customer relationship management software. The company offers a platform for customers and developers to build and run business applications. Based in San Francisco, the Company employs over 29,000 people.

Deal Overview

Announced Date	20-Mar-2018
Deal Size	\$6.5 bn
% of Cash	80%
% of Stock	20%
EV / TTM Revenue	21.9 x

Salesforce Share Price (2/1 – 4/1)

Deal Analysis

Salesforce's purchase of MuleSoft places the Company at the heart of digital transformation. The acquisition of MuleSoft will accelerate customers' digital transformations, enabling them to unlock data across legacy systems, cloud apps, and devices to make smarter, faster decisions, and create highly differentiated, connected customer experiences.

While some companies have already made inroads shifting to the cloud and digitizing business processes, many remain lagging due to the difficulty in integrating legacy infrastructure, automating processes, and managing data growth. Together, Salesforce and MuleSoft can play a large role for businesses that still have not formalized digital transformation strategies.

This transaction highlights a growing trend in the Big Data landscape of large strategic buyers aggressively pursuing next generation platforms in order to rapidly build their capabilities in emerging technologies.

With relatively low free cash flow compared to competitors, Salesforce will likely experience difficulty in future competitive acquisition opportunities. This has hurt Salesforce in the past, specifically during the bidding process of LinkedIn where Microsoft ultimately won out. Looking forward, Salesforce will have to become a picky buyer about large, transformational deals such as the MuleSoft transaction. Improving margins and cash flow will be a critical item not only for the Company's M&A strategy, but also for the sustainability of its high growth trajectory.
